About This Update

This update to the *Using Disinfectants and Gels* manual provides information about using disinfectants and gels with the 3D5-3, 3D7-4, and 3D8-5v scanheads, and the HDI 4000 Ultrasound System. This information supplements the *Using Disinfectants and Gels* manual, part number 4700-0249-18. Please keep this update with that manual; they are intended to be used together.

Scanhead Disinfection

For the disinfection procedure for the scanheads, see “To clean and disinfect scanheads using an immersion method” in *Using Disinfectants and Gels*. These scanheads are immersible as shown in [Figure 1](#). [Table 1](#) lists the disinfectants compatible with the scanheads. Only those disinfectants have been tested and recommended by Philips Ultrasound. Do not use other disinfectants.
